

Java GUI Exercise

Write a simple calculator program such as the following image :

Note:

- This is a simple calculator program just like the **Microsoft Windows** calculator.
- Set the **JFrame** resizable property to **false**.

Hints:

- Use **multi Layout-Managers** to create this interface. See example of section **14.19** from Deitel's book.
- Take a look at the examples of sections **14.18.2** about **BorderLayout** and **14.18.3** about **GridLayout** from Deitel's book.
- Use the **Nimbus** Look & Feel. Just copy the following code at the beginning of your **main** method:

```
try {  
    UIManager.setLookAndFeel("com.sun.java.swing.plaf.nimbus.NimbusLookAndFeel");  
} catch (Exception ex) {  
    System.err.println(ex.getMessage());  
}
```
